Project Pl

- Creates project
- Adds experimenters to projects

Experimenter(s)

- Creates experiments
- Communicates with the Operator

Operator

- **Facilitates** experiments
- Collects and uploads results for experimenter access

Codebase

1. Project PI requests for a project to be created

Codebase

2. Experimenter gets added to a project by project PI

Codebase

3. Experimenter prepares and submits an experiment

4. Operator is notified via email and inspects the experiment

5. Once verified, the operator will update the user and begin pulling the code on the hardware

6. Upon success, update the user and begin running the experiment

7. Upon completion, the operator uploads data to the cloud storage and notifies the user
